Netcap-Flex-Frame

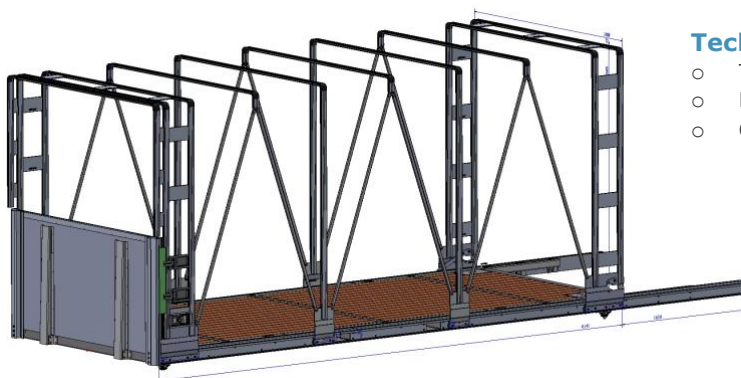

Netcap-Flex-Frame. A versatile and flexible cover system for crane and flat vehicles with an existing floor and 20ft twistlock provision. This innovative system provides transport companies with an efficient and practical solution for transporting goods safely and dry.

Netcap Sliding Tarp

- Aluminium cover system
- Half-height headboard designed for easy crane operation
- Entire tarp can be smoothly slid open in one fluid movement.
- The rails, in which this system moves forward or backward, are mounted on the sides of the frame.

20FT Flex-Frame

- Galvanized steel frame produced for above mentioned Netcap system incl. cornercastings [20ft] and hardwood floor
- Forklift pockets to lift the frame [distance 800 mm]
- 4x steel lifting-eyes to lift the frame with the crane
- Extension arms for positioning the system against the loading floor
- 3 rows of stakes placed crosswise in the floor
 - > 1m from headboard
 - > center of the frame
 - > 1m from the rear

Technical Specifications

- Total weight: 1,700 kg
- Delivered fully assembled and ready for use
- Comes with a tarp available in various colors, with optional printing
